Art Unit: 2857

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1-36 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1+ of U.S. Patent No.

6,618,677 B1. Although the conflicting claims are not identical, they are not patentably distinct from each other because the instant application's claims are broader than those issued in the parent application which is now the patent. It would have been obvious to delete subject matter from the claims for additional possible permutations of patentable subject matter of the issued claims without involving the concept of invention. The instant claims could have been submitted for consideration along with the claims of the parent application for possible prosecution therewith. At minimum a Terminal Disclaimer is necessary to permit issuance of the instant application.

3. The prior art of record does not teach determination of the flow rate based upon the temperature detection methods and systems of the instant independent claims.
